Asthma Program

NextLevel Health is committed to providing high quality and appropriate healthcare services to all of our members. We work with community partners, providers (like you!), and our members to coordinate services to help improve our members' health. NLH is committed to providing high quality and appropriate healthcare services to all of our members.

As part of that mission, we have a program in which we identify members whose asthma and/or COPD may not be controlled. These members may be over utilizing rescue inhalers or not utilizing their inhalers correctly. Identified members are contacted by our pharmacy department who provide counseling to patients regarding their inhaler use. Smoking cessation counseling and importance of influenza and pneumonia immunizations are also discussed. Providers are contacted via fax, if necessary, after patient contact.

For any questions about the program, please contact pharmacy@nlhpartners.com
